

## ACERI & TRACE merge electrical businesses

November-2009

Dear users and partners,

It is my great pleasure to inform you about the finalisation of the integration of ACERI SA and Trace Software SA. This merge will result into the newly Trace Software International (TSI) that I will have the honour to lead.

Trace Software International and TraceParts, the digital contents worldwide expert, are now sister companies and part of the newly created **Groupe Trace**.

ACERI is then a fully owned subsidiary of Trace Software International and share the same mission:

**To enable customers to enhance their productivity, products' and services' while ensuring quality via services and software offers; consequently, to be regarded as a key partner for competitiveness.**

Combined organisations mean a larger more professional and experienced team, with greater innovation and global coverage, and an enhanced software portfolio.

Users will undoubtedly benefit from this new venture and partnerships via territories coverage, increased solutions and more human resources.

- Global presence: Spain, France, China , USA and Germany. Current and new business partners' alliances covering all major industrial countries.
- Software portfolio: currently ELECTRICAL Designer sees the arrival of three new products, Trace Elec Calc (for low and mid voltage calculations), elecworks (innovative 3D electrical for SolidWorks), and Trace PID Pro (Process and Instrumentation Diagrams and fluid circulation plans).
- Enlarged team: Existing support, research and development teams are being reinforced to guarantee innovation and continued state of the art tool delivery.

We assure you that our commitment lies with our existing customers and is stronger than ever before. We are both focused in supplying support and fulfilling expectations for innovative, robust and reliable software.

We will carry on developing new versions that benefit from our richer software portfolio and larger teams experiences.

Feel free to visit our sites or contact us to request more information

To your success,

Dr Pedro Puig. Managing Director ACERI / Trace Software International
